

UNIQUE....

this DEVELOPMENT

STANDING forth as the only development of its kind, in the history of the industry, the Torrance Field of the C. C. M. O. is striking testimony of the fact that industry and beauty can thrive together

Establishing initial drilling operations more than fifteen years ago, the company is proud to have created an industry utilizing 2000 acres in the City of Torrance and on which are 175 producing wells to have developed vast acreage in industrial sites, miles of paved roads and utility service lines

But C. C. M. O. is even more gratified that the underlying thought behind this immense undertaking — which holds that beauty is essential to the project; that the comfort, happiness and wellbeing of her people and fellow townfolk is uppermost — has been carried out as in no other oil development in the world

We are glad that our part in the phenomenal expansion of this community has been and is one which translates civic progress in terms of beauty, happiness and prosperity for the individual and orderly cleanliness as well as profitable activity for the industry itself
